Registration: 476-FBAS/BSIT4/F19

Course: Web Technology

Teacher: IT-334 Sir Majid Bashir

Semester Project

Hotel Room Reservation System

As technology trends increased day by day we are decided to make a hotel room reservation system which provide all basic facilities to the user.

- Provide a better user interface scheme
- Better combination of colors
- Better GUI system
- All these features are designed in a way to attract users
- Provide all the basic information about our website and services
- It also contains the information about the best health facilities like medicines, fitness and it also contain best hotel websites to reserve the room in best hotels
- On the frontend the website structure is made by the help of HTML and CSS
- First we aquire domain from github.com
- Then apply HTML and CSS for basic structure
- Then for more layout Javascript language is used
- Then jquery, bootstrap, php, sql and many other for handling the website and backend development
- This provide proper user information : name, age, gender, CNIC, city and other relative options
